InflammForce

Nutritional Support for Inflammation

Product Details:

Most people are familiar with NSAIDs (Non-steroidal anti-inflammatory drugs). Walk into any grocery store or pharmacy and you will find shelves full of them. People turn to these preparations to assist with inflammation and pain. Oftentimes they are unaware that there are other choices available. As you are putting together healing strategies for your patients/clients, you can offer a natural alternative: **InflammForce**.

InflammForce is a dietary supplement that utilizes the restorative healing properties of Serrapeptase, Pancreatin enzymes and Boswellin. A growing body of research suggests that these key ingredients can nutritionally support the body with anti-inflammatory and pain-relieving benefits.

For more detailed information about the benefits of these key ingredients, please read the Ingredients list.

*Clinical Tip: For additional deep muscle relief mix 1-2 capsules of **InflammForce** with 1-2 Tbsp. of **BioCatalin Lotion** and apply topically.*

Recommended Usage:

2 capsules 3 times daily, or as directed.

Synergistic Considerations:

Core Borage Blend
Inflamma-Chord
Drainage-Tone
ReHydration
Relax-Tone
Surgical-Tone
Fields of Flowers
Rescue Calm
Seratran
BioCatalin Lotion
Healing Gel
NemaBase
Peppermint Oil
Adrenal Force
AminoGest
CoQ10 Liposome Tincture
Flora Synergy
Phyto Rad Antioxidant
Phyto Cal-Mag Plus
SpectraMin

InflammaForce

Key Ingredients:

Serrapeptase (*Serratiopeptidase*) – A proteolytic enzyme which has been used for breaking down proteins, for fibrinolytic and anti-edema activity, inflammation, and stimulating immune activity.

Boswellin (65%) – Under the bark of *Boswellia serrata* is the gummy resin called boswellin. For centuries, Traditional Indian (Ayurvedic) healers have extracted and purified this resin for medicinal use as a valuable anti-inflammatory and rheumatic disease remedy. Ayurvedic healers have reportedly treated diarrhea, fungal infections such as ringworm, boils and other conditions with boswellin. Western sources often refer to boswellin as “Indian frankincense.” Boswellin has also been used topically to relieve minor arthritis-associated aches, moisturize dry skin, and shrink wrinkles. Four triterpene acids referred to as “boswellic acids” (BAs) have been identified as the active ingredients in boswellin. During clinical tests, these four acids support boswellin’s traditional standing as an inflammatory disease remedy, including acting as an anti-inflammatory for Ulcerative Colitis and Crohn’s Disease.

Pancreatin 8X – There are at least four proteolytic enzymes found in pancreatin: trypsin, chymotrypsin, amylase and lipase. It has been used as a digestive aid to assist the breakdown of fats, proteins and carbohydrates, and to treat pancreatic insufficiency, steatorrhea (excessive fat in stools due to malabsorption), after gastrectomy, and cystic fibrosis. Calcium can increase its activity.
